

Toileting Equipment

Toileting equipment ideas

There are many High Street and Online retailers that have a range of toileting accessories to help support children whilst using the toilet. Here are a few examples of the type of equipment available.

Toilet trainer seats.

Provide basic support. Simply place the insert over the toilet seat for an easy and secure fit.

Family toilet seat with incorporated child seat

Build in child seat. A two in one family seat combines a standard adult-sized seat with an added child toilet seat that can be folded away when not in use.

Ladder training steps

These ladders have a child-sized seat and handles to help your child feel secure. When sitting on the toilet they use the step to support their feet.

Support handles

Bath Institute of Medical Engineering (BIME) toilet support handles can be added to standard toilet offering the feeling of additional security for the child.

Toilet steps

Toilet steps help your child access the toilet or to reach the sink for washing their hands.

Modular steps

Modular steps are available from some High Street /online retailers. These are layers of individual steps which can be adjusted to suit the height and use of the child.
